

1 **ABSTRACT**

2 The present invention discloses a system and method
3 for managing client orders from multiple vendors utilizing
4 barcode scanning technology. Client identification
5 barcodes are utilized to identify each of the user's
6 clients. To order products for a client, a user first
7 scans the client identification barcode using a barcode
8 scanner and then scans the barcodes of the desired
9 products. This process can be repeated for multiple
10 clients. A software program is then utilized to upload the
11 barcode information, create shopping lists, and upload the
12 information to different vendor websites for order
13 completion.
